THREE KEY LEARNINGS OF JAVASCRIPT

1. Using JavaScript, you can change the values of HTML and CSS code in real-time. Like a click button for example to change an image.
2. It is best to use JavaScript code in the body of an HTML code in order to make the page load faster.
3. There are four simple output methods in JavaScript that beginners should know which are: console.log – innerHTML – alert and document.write who each play a major and helpful role.
