Kasra’s website

My plans for my website for this course

My plans

1 - For this website is to make it like a webstore for technology. Like the technology section of ebay or Amazon.
2 - Learn HTML and CSS fluently so I can make it a reality.
3 - My goal for this website is to make it fully functional with good UI.
4 - The main purpose of my current webpage is for me to learn how to make a website.
5 - My personal design is something simple yet eye sleek like the official MSI website.
6 - Hopefully I can work alongside a partner in order to get second opinions on making a site.
7 - After I have made my site, a marketing strategy is needed is it is a store. No ads means no sales.
8 - A public domain is needed in order for it to be accessible on the internet.

Extra info

- No budget as of yet due to still being a student.
- Currently only I (kasra Zahedi) am working on this website and everything is made by me (so far).
- Some feature I do have in mind and will add other features once I learn them.
- A mock-up will be made throughout the course as I learn how to master HTML and CSS.
